Help us improve this article with your feedback. Related articles Facebook started as a social media website, and up to date, its desktop site is its main presence. Although there is a site optimized for mobile phones and dedicated apps for Android and iOS, they are not as good as the good desktop site. This is because the site and the mobile apps do not have the same functionality and functionality than that of the desktop site. One of the most important differences is the need to use a separate app called Messenger to chat with Facebook friends. Apart from that, the Facebook app consumes a lot of space and is heavy on the RAM of the device. People who are not a fan of hoarding unnecessary apps on their phone prefer to access Facebook on their mobile browsers. Now, every time you open Facebook using a mobile phone browser, Facebook automatically redirects you to the mobile version of the site. A lot of people do not have high-speed Internet access, and due to this reason, Facebook has created a site optimized for mobile phones that consume much less data than the desktop site. Furthermore, the desktop site is designed for a larger screen, and therefore, if you open the same on a small cell phone, the elements and texts will appear very small. You will be forced to use the device in a horizontal mode, and again, it will be a little uncomfortable. However, if you still want to access the desktop website from your phone, then there are a number of ways you can do it. Method 1: Use the desktop site link the easiest way to open the desktop site directly for Facebook is using a Trick link. When you click on this link, bypass the default setting to open the mobile site. Also, this is a safe and reliable method as the link is the official link for Facebook.com. Follow the steps below to open the Facebook desktop website directly using a link. 1. The first thing you need to do is access your Facebook account and for this you can use the Facebook app that is installed on your device. This method will not work if you are not already connected. 2. Now, open a mobile browser on your phone (it could be of anything else you use) and type Å ç à, ~ Å "https://www.facebook.com / home.phpÅ ç à, ~ In the address bar and press ENTER. 3. This will open the desktop site for Facebook on your mobile phone browser. Method 2: Change the browser settings before accessing each browser Sets a preference for opening the desktop site for any particular particular For example, that you are using Chrome, by default, the mobile browser will open the mobile site for any website visited. However, you can change it. You can choose to open the desktop site instead (if it is available). Follow the steps below to view the desktop version of Facebook on Android phone: 1. Open Chrome or which browser generally uses on your mobile phone. 2. Now, tap the menu option (three vertical points) that you will find on the right side at the top right of the screen. 3. In the drop-down menu, you will find an option for "Desktop Desktop Site. - Click the Reduced box next to it to enable this option. 5. Now, simply open Facebook.com on your browser as you want normally. 6. Web page that you will open after this will be the desktop website for Facebook. Sign in with your username and password, and you are all set. 7. You may receive a pop-up suggestion to switch to the mobile site, but you can simply ignore it and proceed With navigation. READ ALSO: 5 Ways to delete multiple Messages from Facebook Messages 3: Change the browser settings After logging into the switch on the Facebook desktop website can be carried out even after logging into your account On the mobile site. This method is useful when you are already using the Facebook Mobile site and want to switch to the desktop version. Follow the steps below to learn how to make the switch during L' access. 1. First, open your web browser on your Android device. 2. Now, simply type FacceBook.com and press Enter. 3. Log in to your account using your username and password. 4. This will open the mobile site for Facebook on your device. 5. To perform the switch, touch the menu option (three vertical points) that you will find on the right side at the top right of the screen. 6. In the drop-down menu, you will find an option for Å ç à, ~ "Desktop site". Just click on it and you will be addressed to the desktop website for Facebook. Recommended: These are three ways you can open or view the desktop version of Facebook on your Android phone. However, make sure you use the phone in the horizontal mode for better user experience as the text and elements appear otherwise very small. If you are still unable to open the desktop website even after trying all these methods, you need to delete the cache and data for the browser app or try opening Facebook in an unknown tab. form.
