What year was i born in if im 22

Template documentation[view] [edit] [history] [purge] This template tracks the Wikidata property: date of birth (P569) (see uses) This template uses Lua: Module:Check for unknown parameters (sandbox)Module:String (sandbox)Module:Wd (sandbox) This template is used on approximately 32,000 pages and changes may be widely noticed. Test changes in the template's /sandbox or /testcases subpages, or in your own user subpage. Consider discussing changes on the talk page before implementing them. The templates ​{{Birth year and age}} and ​{{Death year and age}} return a person's year of birth or death and their approximate age. The templates are useful when only the year, or year and month, of a person's birth and/or death are known, or if it is desired not to state a person's full dates of birth and death for privacy reasons. Such an approximation differs from the approximation generated by ​{{Birth based on age as of date}}; the latter can be used when the only detail available about someone's birth is a reference that establishes their age as of a certain date (such as the date that the reference was published). The examples on this page use the current date as 23 August 2021. The person's age is estimated as follows: ​{{Birth year and age}}; Let us assume: that the person in question was born some time in 1966; and that the present date is 23 August 2021. If the person was born after 23 August 1966 then they will be 54 years old on 23 August 2021 as they have not had their 55th birthday yet. On the other hand, if they were born exactly on or before 23 August 1966, then they will be 55 years old. Therefore, the template ​{{Birth year and age|1966}} displays their birth year and age as: 1966 (age 54–55). Optionally, if we know the person's birth month but not the day, we can also have the template display the month. Let us assume that the person was born in June 1966. Therefore: If it is presently January 2021, then this year the person has not had their birthday yet. Therefore, the template ​{{Birth year and age|1966|6}} displays their birth year and age as: 1966 (age 54). If it is presently June 2021, we do not know whether the person has had their birthday this year yet since their day of birth is unknown. Therefore, the template displays their birth year and age as: 1966 (age 54–55). If it is presently December 2021, then this year the person has already had their birthday. Therefore, the template displays their birth year and age as: 1966 (age 55). ​{{Death year and age}} Let us assume: that the person in question was born some time in 1970; and that they died some time in 2020. We can posit as two extremes: (1) that the person was born on 31 December 1970 and died on 1 January 2020, in which case they would have been 49 years old at the time of their death as they did not achieve their 50th birthday on 31 December 2020; and (2) that they were born on 1 January 1970 and died on 31 December 2020, in which case they would have been 50 years old at the time of their death as they had their 50th birthday on 1 January 2020. Therefore, the template ​{{Death year and age|2020|1970}} renders their death year and age as: 2020 (aged 49–50) Optionally, if we know the month of the person's death but not the day, we can also have the template display the month. Using the above examples and assuming the month is 08 (August) Therefore, the template ​{{Death year and age|2020|1970|08}} displays their death year and age as: August 2020 (aged 49–50) If you wish to set out the full dates of birth and/or death of a person and thus to calculate their age accurately, please use the templates ​{{Birth date and age}} and ​{{Death date and age}}. Syntax ​{{Birth year and age|year of birth}} ​{{Birth year and age|year of birth|optional number of month of birth}} ​{{Death year and age|year of death}} ​{{Death year and age|year of death|optional number of month of death}} Examples ​{{Birth year and age|1966}} → 1966 (age 54–55)1966 (age 54–55) ​{{Birth year and age|1966|7}} → July 1966 (age 55)July 1966 (age 55) ​{{Birth year and age|1966|9}} → September 1966 (age 54)September 1966 (age 54) ​{{Death year and age|2020|1970}} → 2020 (aged 49–50)2020 (aged 49–50) ​{{Death year and age|2020|1970|08}} → August 2020 (aged 49–50)August 2020 (aged 49–50) Tracking categories Category:Pages using age template with invalid date (0) Category:Pages using birth year and age template with unknown parameters (0) Category:Date of birth not in Wikidata (557) Category:Articles without Wikidata item (117) See also The above documentation is transcluded from Template:Birth year and age/doc.
