This press release has **NOT** been issued by
 Ministry of Health and Family Welfare

Ministry of Health and Family Welfare has issued the following press release giving latest Covid inputs:

The fears expressed earlier regarding the spread of Covid19 in India for the last 3-4 weeks were finally confirmed today in the press release issued by the Ministry of Health and Family Welfare (MoHPW). Some of the salient points mentioned in the press release today:

1. INSACOG has detected 771 variants of concerns (VOCs) in a total of 10787 positive samples sequenced. The distributions are as follows:
 UK (B.1.1.7) variant - 736.
 South African (B.1.351) variant - 34
 Brazilian (P.1) variant - 1
2. These variants of concerns, which are much more infectious than the original Wuhan strain) are now circulating in 16 states.
3. Additionally, new local variants of concerns specific to India have been detected. Sequencing has found that the fraction of samples with L452R and L452R mutations are much higher now.
4. The N440K variant that is associated with immune escape has been found in 6% samples from Kerala, 33% of samples from Andhra Pradesh and 10% samples from Telangana.
5. All the above mutated strains circulating in India now make the virus much more dangerous. The mutations, in addition to significantly increased transmissibility, help the virus escape our immune system, meaning that many who have been previously infected or vaccinated "might" get re-infected.
