Is it possible to remove watermark from pdf

This software from Thundersoft allows you to remove pesky watermarks and other texts and images on your videos.An essential tool for anyone who needs to remove watermarks from movies and other video files. Offers great solutions and features. Watch movies the way they were meant to be enjoyed, without any watermarks obstructing them. Video Watermark Remove is a great option to edit the appearance of films without ruining the quality. Choose from one of the three methods to remove text or image from videos. Delogo, Mosaic, and Gaussian Blur will declutter your screen in different ways. You can choose one of the options depending on what type of mark you are removing. Increase the effect of the remover if the watermark is still noticeable after you've applied the method. Save yourself time by editing several videos at once. The software is great for removing watermarks in batch, and its functionality isn't affected if you choose to work on other videos simultaneously. Add your own watermark to videos as well. It allows you to create overlays of text or images. Copyright your work and take the credit for your own videos and movies. There is the possibility of creating counterfeit products with this software. It allows for the removal of watermarks and the addition of fresh text or images to be added, which could be for reselling purposes. Generally, the software is only used to enhance one's own viewing experience and copyright work. Where can you run this program? This program runs on Windows XP and later. Is there a better alternative? No. It works great and is an efficient way to remove watermarks and add your own. If you don't want to cough up the money, try Apowersoft Online Watermark Remover.ThunderSoft Video Watermark Remove is consistent and easy to use. Its capacity to remove watermarks from multiple pieces of media, at the same time, is something that makes it stand out. Should you download it? Yes. If you're looking for a program to remove some pesky watermarks from different pieces of media, this is a fantastic option.HighsProcess multiple videos at onceLarge variety of overlaysConsistent qualityLowsExpensiveNo preview optionCan create counterfeit media This site is not available in your country A watermark is a faded background image that displays behind the text in a document. You can use them to indicate a document's state (confidential, draft, etc.), add a subtle company logo, or even for a bit of artistic flair. PowerPoint doesn't have a built-in watermark feature like Word, but you can still add them with a text box. How to Insert a Watermark into PowerPoint It's not quite as easy to add watermarks to PowerPoint as it is to Microsoft Word. However, you can add watermark text to the background of individual slides or all slides at once using the Master Slide function. We're going to look at how to add watermark text to all slides in a presentation by using the Master Slide feature. If you only want to add watermark text to an individual slide, you can skip the steps for going to the Slide Master. First, switch to the "View" tab on the PowerPoint ribbon. Click the "Slide Master" button. This brings up the master slide layout for all of the slides in your deck. Click on the first parent master slide. If you're only inserting watermark text on a single slide, this is where you'd start; select the individual slide on which you want to insert the text rather than going to the slide master. To insert the text or image you want to use as your watermark, click the "Insert" tab. Click the "Text Box" button. A text box will appear on your slide. Type whatever you would like in that text box. After you have typed what you want to, you can mess with the formatting of the text box. You might want to drag the curved arrow to rotate the text, like so: Or, you might want to head on over to the "Format" tab on the main PowerPoint ribbon to change settings like color, transformations, and more. It's up to you! Finally, decide whether you want the watermark to appear behind everything else on the slide. To do so, click the "Send Backward" button on the "Format" tab and choose "Send to Back." Once you've got your text the way you want it, it's time to exit the master slide view if that's what you're using. Switch over to the "View" tab and then click "Normal" to go back to the normal slideshow view. You'll now see your watermark text on your slides. If you inserted the text onto your master slide, any new slides you insert will have the same watermark text on them. How to Remove a Watermark from PowerPoint If you'd like to remove your watermark from PowerPoint, all you have to do is delete that text box. Select the slide with the watermark (or head back over to the Master Slide view if that's where you inserted the text box). Click the text box. And then hit "Delete" to get rid of it. Your slides will be watermark free! In the app you used to create the watermark, select the watermark text or image, and press Delete. Or, use an image-editing app like Photoshop to crop a photo to remove a watermark. Or, try a third-party online watermark-removal tool like Inpaint. This article offers suggestions on how to remove a watermark from your image using the original app, cropping with an image editor, or using an online tool. Note that removing the watermark from an image for which you don't own the copyright is likely illegal. We advise that when you want to watermark one of your photos, make a copy of the photo and create the watermark on the copy. When your watermarked image was created with an app such as Microsoft Word, PowerPoint, or Paint 3D, use that app to remove the watermark. Deleting a watermark might require unique steps depending on how it was created. These directions can be used to remove any watermark from any photo. Open the app that you used to create the watermarked photo. Open the file that contains the watermarked photo. Find the photo that contains the watermark. Select the watermark text or image, then press Delete. Right-click on the picture and select Save as Picture. Give the image a name, choose a file format, and click Save. If you can't select the watermark, it may be grouped with the picture. Choose the photo and then select Ungroup. When a watermark is near the edge of the photo, crop the photo to remove it. When you crop a picture, part of the image is cut off and the image is smaller. You'll find a Crop tool in image editing apps such as Adobe Photoshop and GIMP, and in productivity software such as Microsoft Word and PowerPoint. Here's how to crop a photo to remove a watermark: From the image editor, open the photo that has the watermark. Select the Crop tool. Drag the handles to select the section of the image you want to keep. Submit the changes by pressing a Save or Done button. If you can't delete the watermark or if you don't have the original image without the watermark, use a photo editing software such as Photoshop, GIMP or Pixlr. The Clone Stamp tool in these apps will cover up the watermark with a part of the photo. To remove a watermark with the Clone Stamp tool in Photoshop: With the image open in Photoshop, select the Clone Stamp tool from the tools menu. It's the one that looks like a stamp. Select a brush style and size that will cover the watermark. Use a soft round brush to make it easier to blend the cloned area and avoid sharp edges. With the Alt key pressed, select a part of the image that doesn't include the watermark, and then depress the key. The area you select should have similar colors and textures as the part of the photo that the watermark is covering. Brush over the watermark area to replace it with the background you sampled. You might need to keep resampling an area of the page to get it just right, and you can adjust the brush size from the menu at the top of Photoshop. This method may take some time and practice if you aren't familiar with Photoshop or similar tools. There are several online tools that make it easy to remove a watermark from your photos. If you're looking for an online tool, check out InPaint. Removing a watermark in InPaint is similar to using the Clone Stamp tool. Select the watermark, and the app does the cloning work. Here's how to use InPaint: Go to the InPaint upload page. Select Upload Image and choose the photo that contains the watermark. Choose the Marker Tool. Draw over the watermark. A transparent color will appear to show the area you're selecting. Select Erase. Select Download to save the photo to your computer. You'll need to purchase credits to save the image in a high-quality format. Otherwise, it will save as a low quality image. Thanks for letting us know! Tell us why! Also referred to as simply watermarking, a pattern of bits inserted into a digital image, audio or video file that identifies the file's copyright information (author, rights, etc.). The name comes from the faintly visible watermarks imprinted on stationery that identify the manufacturer of the stationery. The purpose of digital watermarks is to provide copyright protection for intellectual property that's in digital format. Unlike printed watermarks, which are intended to be somewhat visible, digital watermarks are designed to be completely invisible, or in the case of audio clips, inaudible. Moreover, the actual bits representing the watermark must be scattered throughout the file in such a way that they cannot be identified and manipulated. And finally, the digital watermark must be robust enough so that it can withstand normal changes to the file, such as reductions from lossy compression algorithms. Satisfying all these requirements is no easy feat, but there are a number of companies offering competing technologies. All of them work by making the watermark appear as noise - that is, random data that exists in most digital files anyway. To view a watermark, you need a special program that knows how to extract the watermark data. Watermarking is also called data embedding and information hiding.
