7 years ago 7 years ago 7 years ago 7 years ago the cell uses three different types of RNA to build proteins. rRNA is part of the ribosome, which is the site of protein synthesis. mRNA carries genetic information from DNA: The information specifies the amino acid sequence in the new protein. tRNA interprets information from the mRNA and brings the appropriate amino acids to the ribosome. yu.cs 7 years ago 6 years ago 6 years ago 6 years ago 11 months ago 11 months ago Searching questions from emile by questions from and maternity of card Direct questions Gallery Resource Gallery Blog Blog DictencinoChatÁ Social Facebook Twitter YouTubeCommunity Statswho's Online Staff Biology Forum - Study Forum Â© 2010- 2021 | Powered by SMF | SMF Â© 2015, simple machines | Sitemap Biology-forums.com is not affiliated with any publisher.
