Do not let your creations go up into a breath of dying-drive smoke; Read while we show you how to locate and (automatically) back up minecraft critical files. Because backing up your minecraft universe as you can imagine that the world around the neighborhood is that those geek guys know how to meet computer and minecraft love, so we received more than some panic phone calls and knocks on the door from the parents of the neighborhood The elaborate children's minecraft creations have disappeared. We cannot overcome the importance of supporting your minecraft creations, both to protect them from data loss and gone-wrong game updates, but also to protect them from HICCUps in the modification process as you move to a minecraft modification more advanced. We are excited to build on our original minecraft series and show how to modify your game and expand the minecraft experience in ways you may not even understand that you could, but we want to be very definitely that you will not destroy fantastic creations in the process. You will look at the point where critical files are stored, which you need to back up and how to automate the process. While this series, like the last series, is mainly focused on the PC edition and is not the smallest but popular Pocket Edition, we also highlight how to back up minecraft mobile editions. Identification of critical files The first thing you need to know about the backup of minecraft files is that there is a huge difference between the minecraft launcher and minecraft system files. Minecraft Launcher is the application with which the game starts and is labeled as follows for the three supported operating systems: minecraft.exe windows minecraft.dmg mac os x minecraft.jar linux This launcher is also a tool that you Helps customize the pray options as a profile you want to use. Communicate with minecraft servers, helps you access your account and launch the game. Pitcher backup does nothing and here that many players discover (too late) who have lost important files. The actual game files, including gaming libraries, registers and, especially your saved games, generally find themselves in a completely different place from your launcher. For the three primary operating systems they are located in the following places by default: Windows% AppData%. Minecraft Mac OS X -- / Library / Application / Minecraft Linux / HOME/[USERNAME].minecraftCraft/ The only time you do not find minecraft system files in these positions is if you use an alternative launch tool third-party or you manually changed the game profile to point to a new directory position. Identify which files must be backed up there is one of the rest in the minecraft system folder. Everything you need to run the game as well as all the contents you have created as a player (Game Worlds and Screenshots) as well as the contents you added (like resource packages) you are here. Take a look at the Minecraft directory to get a better way where the irreplaceable data is. Inside the directory you will find the following subdirectories. Let's lower directories and files containing user-created content that will not be automatically downloaded by Mojang if the directory is deleted or damaged. / Activities / Contains gaming assets as icons, language pack and sounds. If you want to listen to minecraft thematic songs outside the game, you will find them in / Music / Game // Bookcases / Contains Java libraries for managing audio / video rendering and other activities. / Logs / Contains debug / game logs. Useful for problems troubleshooting, but otherwise not important. / Resource Pack / Packages of resources downloaded by the user (which were called Texture Packs). Resource packages allow players to awaken the game with new textures and / or new sounds. / Screenshots / Contains all captured in-game screenshots using the In-Game In-Game screenshot (By default, activated with F2). / Save / contains your minecraft worlds. Every world has a unique directory based on its name (for example / new world /, / Wizard Land /, etc.) / versions / contains your current and (potentially) past versions of minecraft organized by numbered subdirectory of the version. Launcher\_profiles.json database file: Contains all relevant information on your individual profiles, including the default profile. / Zauncher.jar Archive of Games and libraries. file related to launcher-pack.lzma auxiliary-pack.lzma. /options.txt text file containing all user configurable in-game options such as mouse sensitivity, chat options and key associations. Now, the most barbone way to face minecraft backup would be to take only the files that will not be automatically downloaded during a new minecraft installation. In this case you must absolutely copy the save / directory to back up your actual worlds, then copy the directory / resource / directory if you have installed any custom resource package. You would also need / screenshots / directory if you want to save your screenshots and leacher\_profiles.json files and options.txt to ensure that profile settings and games settings are preserved. Everything else in the table above will be automatically downloaded from Mojang servers. That being said, Chery by selecting which files to download or write a personalized batch script to do so is a bit irritating when it is so easy to back up the whole directory (the content provided mojang is generally only about 200 MB). (Seeds) Automation of the backup process There are dozens of ways to automate the backup process for your minecraft universe; More than we can cover the variety of backup services and tools available here. We can't stress the importance of supporting your creations enough, however, then go beyond some of the methods in which we invite you to consider. Manual backup This is the least complicated and less efficient method, but trust us, you will forget to keep up on your backups. It won't it once or twice, faithfully copy the glorious world of minecraft to a flash drive or a backup hard drive, and then forget. Do you know when you remember you forgot to make a recent backup? Immediately after the creation of 200+ hours of Mega vanishes and remembers that you supported him last for about 15 hours in the project. Manual backup gets the job done, but there is too much human mistakes / forgetfulness for our tastes. Add your minecraft directory to local backup tools If you are playing Minecraft on a Windows machine coupled with the Windows Home Server backup tool, a Mac coupled with the time machine or a Linux box configuration with anomalous stop plane, Make sure your Minecraft The system directory is added directly to the backup list or within a sub-directory already performed. Synchronize with a cloud-based tool Although we set Minecraft on the backup with the above method (to a backup server in the office basement), our favorite minecraft backup makeup is to move the directory of the minecraft system directly in the root directory of Dropbox (or a similar cloud-based folder). Not only does this completely automate the backup process, but also means that your creations can be synchronized among computers to allow you to work on the same world if you are sitting at home on your desktop computer or traveling with your laptop. The simplest way to enable this type of synchronization is simply copying the minecraft directory to the folder Run the launcher and then change the profile entry so that no more points in the old directory, eg. /PDDATA/roaming/minecraft/, and now points in the new directory, eg. / My documents / Dropbox / .minecraft. Backup of Minecraft Pocket Edition Don't let's go back, we think we report all that job you have invested in Minecraft is quite important that we do not go to leave the pocket players in the edition. Minecraft data files are located in the Directory on Android and iOS devices: Android /sdcard/games/com.mojang/minecamps/com.mojang/minecraftworldids iOS / Documents / games / Com.Mojang / MinecraftWorlds / You can modify and copy both directories without the Rooting or jailbreak of the respective devices; You simply need an Explorer file to navigate the directory and create a copy. You can easily do it on Android using a tool like ES File Explorer or iFileExplorer on iOS. The same backup suggestions for the PC edition are permanently applied to the Pocket edition. Manual backups are better than no backups, but they are not as good as automatic backups. Both ES File Explorer and iFileExplorer (if you update to the Pro Edition) supports cloud-based synchronization. Armed with a constantly applied backup routine Your minecraft worlds will be safe, sound and ready for restoration in the event of an unfortunate failure of the hard drive: no tear on lost cities and distaced mines. necessary.
